

# Count and Collect to 100

# Count and Collect to 100

## Materials:

- Numbered dice (1 or 2 depending on the needs of the students)
- 100 connecting cubes for each player
- Place value mats

## Directions:

- 1) Partner one rolls the dice and counts out that many connecting cubes and places them on the place value mat. (When a quantity over ten is reached, the child connects ten cubes into a ten-train and puts them on the tens side of the mat.) Using the math talk card, the student states how many groups of ten and leftover ones have been collected in all.
- 2) Partner two takes his or her turn.
- 3) Play continues until someone has placed 100 (or 50) cubes on his or her place value mat.
